

Key Operational Cause Effect Analysis

skills: in regulated industries

**A one-day intensive course, learning how to analyse Causes and Effects.
At the end of the course, attendees will**

- Understand that effective problem solving is a skill and are encouraged to use CEA to improve their performance in that skill.
- Know how to make use of and improve existing process documents (Master Batch records/recipes, HACCP studies, Validation reports etc).
- Realise the importance of timely preservation of incident information.
- Know how to identify likely causes and their potential combined effects.
- Be confident of testing potential causes and develop solutions to address Root Causes.

Course benefits

A systematic approach to raising product integrity, safety & efficiency.

Managers, inspectors and auditors can have confidence that trained people are tackling improvement actions.

Transparent documentation that demonstrates progress and a professional resolve to achieve control.

Reinforces the importance of data capture early in the investigation and complements process improvement programmes such as 6 sigma.

Consistent issue handling across shift, department and site boundaries.

Who should attend?

The course is suitable for personnel at operator/technician/manager levels. A hands-on approach gives the chance for quick learners to stretch their learning.

Course Fees

The course fee is £325 per person, assuming a group size of 8 people on your site (recommended) on Mainland UK. Alternative pricing plans available on request.

Individual incident support

Incidents requiring immediate one-off support may be available. Please contact to find availability.
